

# 4 WAYS TO IMPROVE CYBERSECURITY OF YOUR ONGUARD SYSTEM

Identifying and addressing cybersecurity risks is critical to reduce the threat of cyber attacks on your organization. LenelS2 recommends the following approach to help you harden your security system.

## Assess and Identify Vulnerabilities

Evaluate your security infrastructure to identify any potential weaknesses by conducting a thorough audit of your network, systems, and applications. Our Professional Engineering Services (PES) team can provide you with audit services to analyze your system security.

1

## Regularly Update and Patch Software

Keep your software and systems up to date with the latest patches and security updates. With a valid support plan (SUSP or Platinum), LenelS2 is ready to help you operate and maintain your system at peak performance.

2

## Educate & Train Employees

Educate and train your employees about security best practices and the importance of maintaining good security. LenelS2 training courses provide you with the knowledge to securely operate and maintain your system.

3

## Capitalize on LenelS2 Experience

A range of services are available to address every aspect of cybersecurity from discovery and education to implementation, remediation and ongoing maintenance. Our skilled engineers can perform all these actions to keep your system well-maintained.
