

# Elements Video

Flexible video solutions  
for a changing world.

# In your Element

The LenelS2™ Elements™ solution is perfect for cloud-first organizations and those with limited IT resources, business or satellite locations. The Elements video solution can stand on its own, though it perfectly complements the Elements access control solution. Working together, the key components of the Elements solution can provide a secure workplace for organizations that may not have permanent IT staff or security personnel. Easy to run and maintain, the Elements solution provides hassle-free, effective security that allows businesses to focus on more important things — like running their business. Updates and enhancements are pushed in real time reducing costly site visits, making budgeting more predictable, and keeping capital expenses down. Mobile-first, the solution can be accessed at any time, from anywhere. As the only unified access control and video management solution that integrates with the LenelS2™ OnGuard® security management platform, the Elements solution can expand to meet the needs of a business as it grows. As your business grows and requires enterprise-level functionality, you can rest assured that the Elements solution will grow with you.

## Small- and medium-sized businesses

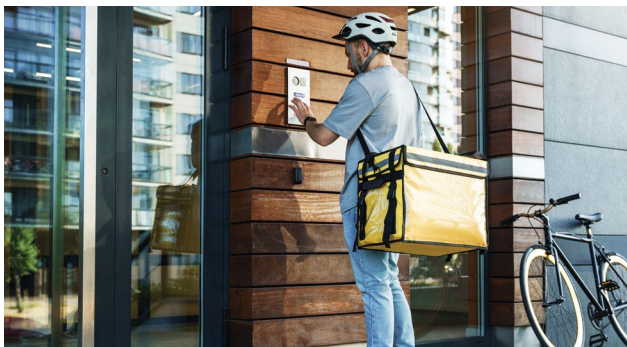

### Professional offices

Implement security at a predictable monthly cost and manage with fewer resources.

### Small business owners

Cloud-based, scalable security that can grow alongside your business.

### Property management companies

Secure and monitor multi-tenant buildings of any size.

### K-12 Education

Lock doors and visually monitor multiple locations on your campus from anywhere, on any device.

# Robust video solution, unified hardware

The Elements video solution leverages the ONVIF specification for video camera connectivity and streaming. You can leverage your existing equipment investment by using your existing, ONVIF-compliant cameras, and you won't be locked in to a proprietary camera architecture.

## Simple & intuitive user experience

### View video anytime, anywhere

Elements utilizes the WebRTC protocol for secure, browser-agnostic viewing, and leverages two different connection paths (direct or cloud-relayed). An always-available connection to your video streams is thereby ensured, no add-ons or port-forwarding required.

### Video Clips stored in the Cloud - Public Link

Easily access your video clips from anywhere across Elements' multiple deployment models, on any device, and download to your local machine.

### Camera SD Card Record

For small systems, there is no need for a recorder; it's possible to record directly to the camera's SD card.

### On-prem storage

An on-premise recorder keeps your recorded video secure and always available on-demand. Even if your internet connection fails, video is still being captured and stored.

### Video monitoring

Accessible through a browser, easily view up to 16 live video streams from your desktop, tablet, or mobile device.

### Mobile-friendly

The web portal is mobile friendly on any platform or device. The user interface will scale automatically for convenience. View 16 cameras live on the Elements Dashboard.

### Event monitoring

Easily attach video to internal and/or external building events and jump directly to the event from the real-time event monitor.

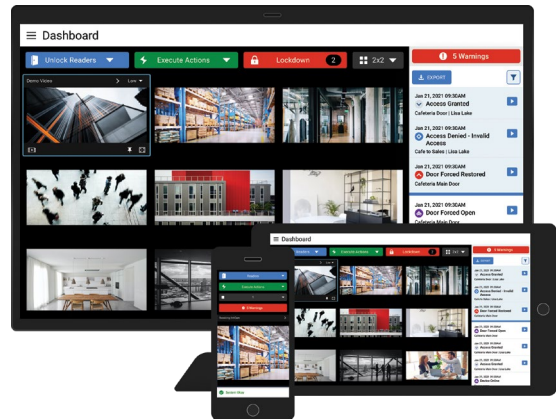

### Assign multiple cameras to a space

Cameras assigned to a space will be accessible via event video feed; and select the specific desired camera feed to display.

### Real-time hardware events

Easily interact and monitor the system from anywhere. You will be notified when any hardware components in your system have gone off-line.

## Hardware support

The Elements cloud-based solution integrates with the hardware you know and fits seamlessly into the LenelS2 ecosystem of products.

### Elements Video Recorder

Designed specifically for the Elements system, the Elements Video Recorder supports up to 16 IP ONVIF® Profile T-compliant cameras per recorder with up to 8TB of on-premise video storage.

### Select Your Own Camera

You can use most ONVIF Profile T-compliant video cameras; you are not locked in to using any particular brand or family of cameras.

### Access Control Gateway Integrated within Elements Video Recorder

A separate access control gateway is not required when you add access control to your video system, thus saving the costs for hardware that would be needed with other solutions.

### Milestone XProtect Integration

Elements users can access live and recorded video streams and events from the XProtect Server.

# The Power of Choice in Deployment Model

## Standalone Video with No Recorder Needed

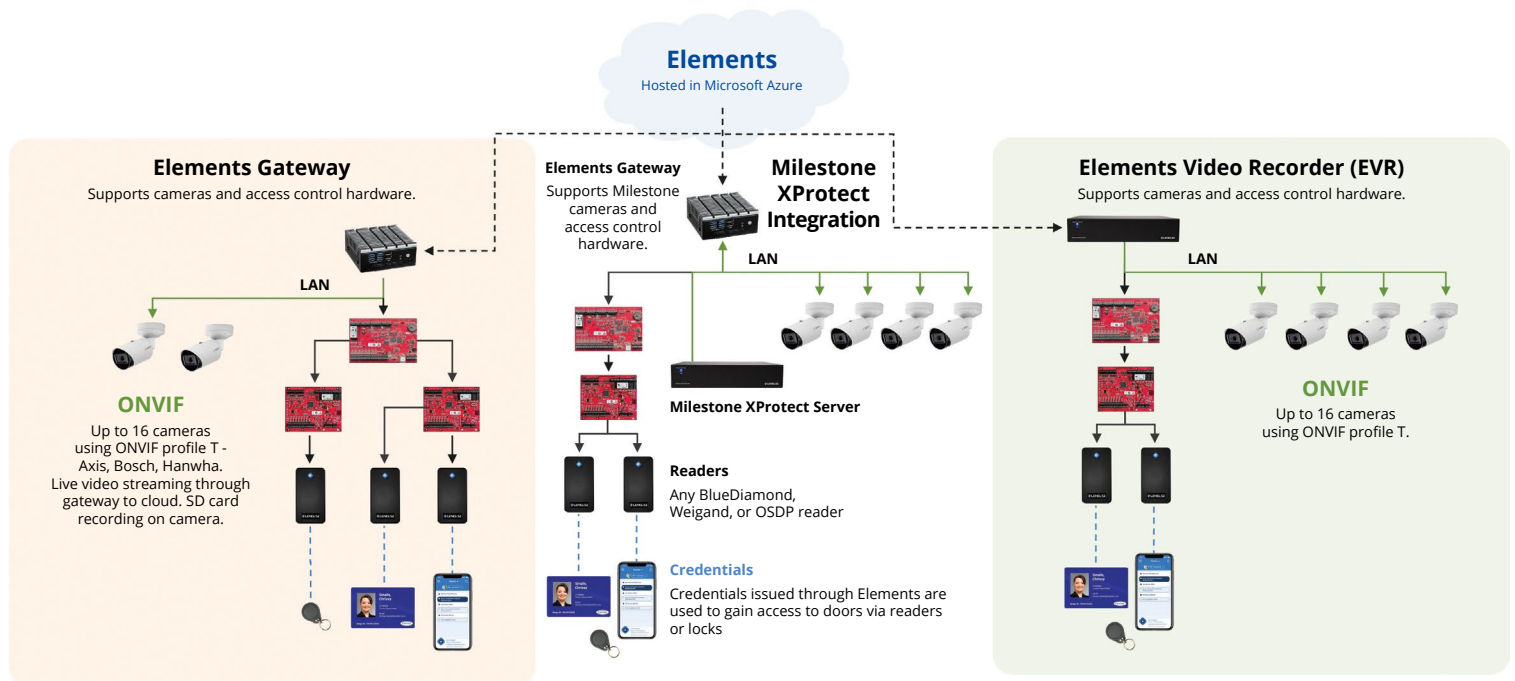

Connect using the access control gateway — connect directly to cameras' SD card for live and recorded video. An access control solution can easily be added at a later date.

## Video with Access Control

Using the EVR's built-in gateway, an external gateway device is not necessary to deploy your access control solution hardware. Store recorded video in a secure, on-site recorder to ensure security and reliability. Even if the internet connection drops out, recording will continue.

## Milestone XProtect Integration

The Elements Gateway supports cameras connected to the Milestone server and access control hardware. Through the Elements user interface, Elements users can access live and recorded video streams and events from the XProtect Server.

LenelS2 is a global leader in advanced physical security solutions, including access control, video surveillance and mobile credentialing. Our technology includes web-based and mobile applications enhanced by cloud-based services. Incorporating open architecture, LenelS2 provides scalable, unified security management solutions to customers ranging from global enterprises to small- and mid-sized businesses. Easy to install and use, LenelS2 products are supported by an experienced, responsive team dedicated to providing exceptional service. LenelS2 serves segments worldwide including corporate, education, healthcare and government. LenelS2 is a part of Carrier Global Corporation, a leading global provider of healthy, safe and sustainable building and cold chain solutions.
